

In-Circuit Emulator for MC68020/30

- 33 MHz no-waitstate emulation
- MMU support
- FPU support
- Support for companion mode MC68360
- Interface with all compilers
- C++ support
- CASE tools interface
- RTOS support
- Windows9x, NT and Motif interface

MC68020

MC68030

MC68EC020

MC68EC030

The ICE68020 emulator module supports the MC68020 and MC68030 processors from Freescale. The EC versions are supported as well.

The software has direct access to MMU and FPU functions.

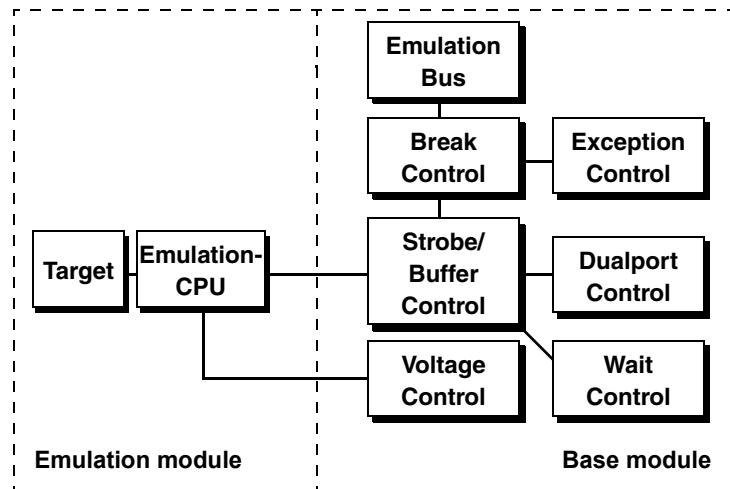

A software compatible ROM monitor is available.

TRACE32-ICE is a state of the art In-Circuit Emulator, which offers unlimited hardware breakpoints and up to 16MByte dual-ported emulation memory. The real-time trace and trigger work up to the max. speed of the CPU. The analyzer offers selective trace as well as performance analysis and statistic functions.

TRACE32 works with the highest variety of host interfaces. The communication link to the host is done by the printer port, a fibre optic interface or ethernet allowing a high-speed transfer.

Features

Basics of Operation

The ICE-68020 is a high-performance emulation system for all 68020 and 68030 derivatives from Motorola.

Operating Modes

The Emulator can work in stand-alone mode with internal clock or in active mode with internal or the target clock. On power-down of the target system the emulator tristates its output buffers and isolates its internal emulation circuits.

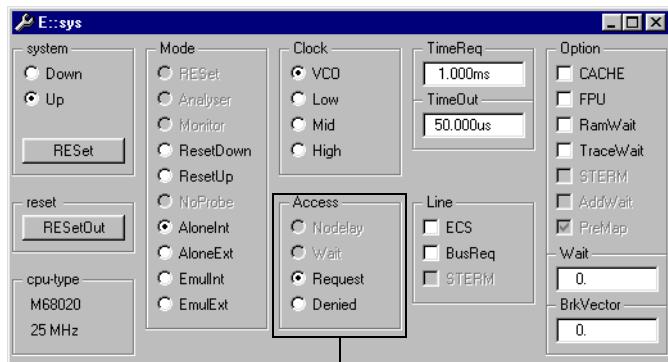

- Reset Down
- Reset Up
- No Probe
- Alone Internal
- Alone External
- Emulation Internal
- Emulation External

Wait System

- Additional wait cycles (1-15) can be specified
- Up to 250 wait cycles (4K blocks globally and bytewise in 64K area)

Voltage and Clock Monitors for the Target System

Dual-Port Access

Dual port access modes

All TRACE32 memories are dual-ported. The dual-port access makes it possible to display and modify the contents of the overlay memory, to set or delete breakpoints or use the flag memory while the application is running in real-time.

The following dual-port access mode is implemented:

- Request

In the **Request mode** the dual port access is always possible.

In the **Denied mode** the dual port access is switched off.

MMU Support

- Display of Register
- Display of translation tables
- Debugging with logical addresses
- Separate logical memory spaces for multitask environments

Emulation does not use any Memory

- No target stack required

Cache Support

ICE-68020 supports cache operations for the target memory.

HLL Debugging

The TRACE32 debugger provides a interface to C, C++, PASCAL, PEARL and ADA for all standard compilers. For more information on the supported compilers refer to the section "Debug Interfaces".

Full support in real-time for:

- Break-before-line operation
- HLL single step in real-time
- Trigger and trace on local variables

Background Task

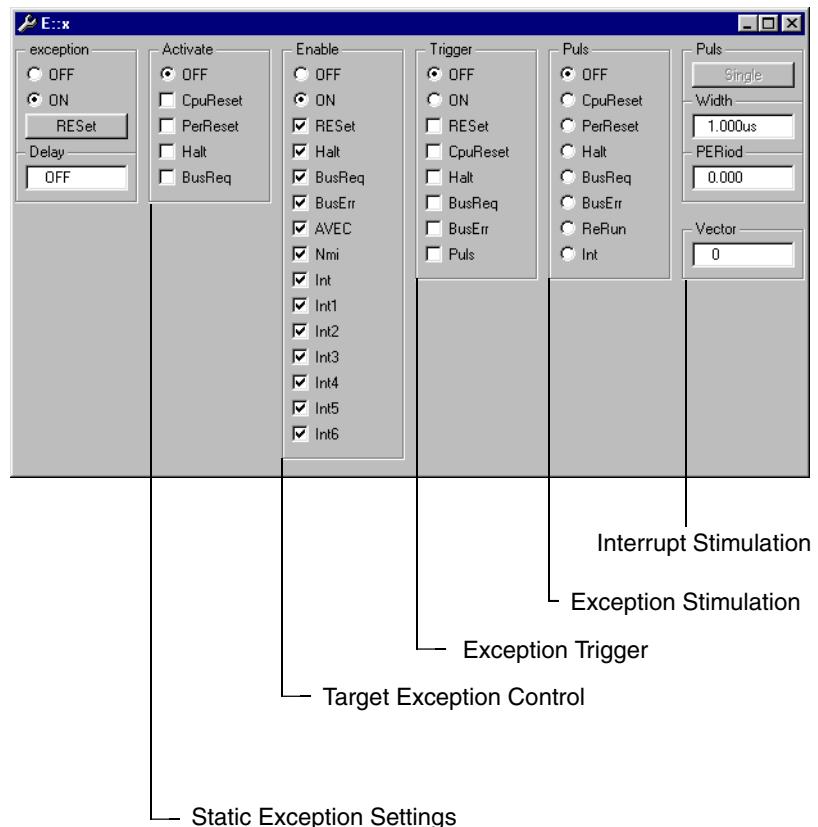

The background task allows:

- To process interrupts

- To maintain the refresh of a target DRAM

while the emulation is stopped.

Exception Control

The TRACE32 exception controller allows to permanently activate an exception, to enable or disable specific exceptions, to trigger on specific exceptions or to stimulate an exception.

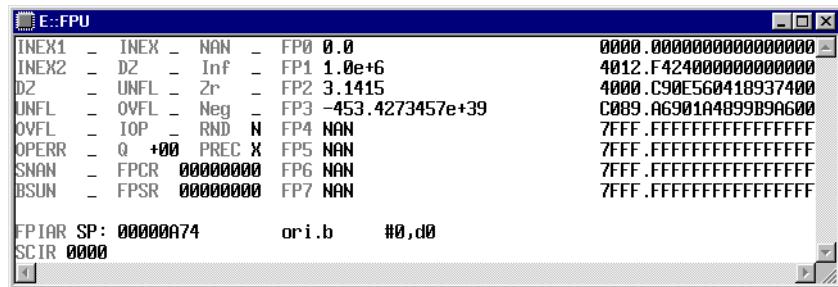

- Interrupt Simulation
 - Level-1...7-interrupts
 - All vectors

TRAPs used for Emulation

Program breakpoints are installed by a BPT instruction. ICE-68040 offers free selection of the breakpoint vector to avoid conflicts with other applications.

- BPT0,2,4,7 selectable

FPU Support

The display and the modification of the FPU registers is supported.

32 Additional Trace Channels

- 16 Bit Date
- 4 Bit State
- 12 Bit Address

Limitations

- No Burst Mode (68030)

Emulation Modules

Modules Overview

tbd

Debug Interfaces

TRACE32-PowerView supports most compilers, realtime operation systems and debuggers.

New integrations are mostly done on customers request. If your compiler or RTOS is not supported now, please ask us !

Operation Voltage and Frequency

The maximum operation frequency of TRACE32-ICE depends on:

The max. frequency of the CPU

The access time of the overlay memory (15ns or 35ns)

- The mapper mode (Slow or Fast)
- The number of waitstates (WO = 0 waitstates W1 = 1 waitstate)
- The dual-port access mode

Denied and Request Access

Operating Voltage

This list contains information on probes available for other voltage ranges.

Probes not noted here supply an operation voltage range from 4.5V to 5.5V. tbd

Available Tool Chain

TRACE32 provides a complete set of development tools for this family. This includes:

- The In-Circuit Emulator TRACE32-ICE
- The high speed RISC Emulator TRACE32-FIRE
- The BDM/JTAG/ONCE etc. based In-Circuit Debugger TRACE32-ICD
- The ROM Monitor based In-Circuit Debugger TRACE32-ICD

- The ICD Trace, a trace extension to the BDM/JTAG debuggers or ROM monitors
- Evaluation boards, which can be used until the target hardware is available.
- The Instruction Set Simulator (SIM), a software tool for code test without any hardware

The following list give an overview which development tools are available for the specific derivatives of this family.
