

## CHORUSOS™ REAL-TIME OPERATING SYSTEM

---

### RTOS Debugger for Chorus

**68360**  
**ARM7**  
**PowerPC**  
**X86**

- Improved support for the Chorus Kernel debugger KDB
- Real time, non-intrusive display of Chorus system resources
- Chorus specific display of analyzer listing
- Statistic evaluation and graphic display of thread run times
- Thread related evaluation of function run times
- Statistic evaluation and graphic display of thread states
- Thread stack coverage
- PRACTICE functions for OS data
- Chorus related pull-down menu

The TRACE32 System includes a configurable multitask debugger to provide symbolic debugging in real time operating systems. Our software package contains a ready-to-run configuration for the Chorus/ClassiX Real Time Kernel from Chorus Systems.

## Multitask Debugging on TRACE32 with ChorusOS

### Improved support for the ChorusOS Kernel Debugger KDB

ChorusOS provides a kernel debugger called KDB, which runs on the target. TRACE32 provides an interface to this debugger. I.e. you can control the debugger and view its outputs inside the TRACE32 surface. The communication is set up via the emulator's dual

port memory, substituting the serial interface routines of KDB. This technique provides high speed, transparent communication with the target without the use of any serial hardware or other target resources.

```

E::term e:K_T32OUT e:K_T32IN
Local Site Number 1, Incarnation Number 1
Kernel initialization done
Kernel size: text 161280 + data 11100 + bss 820496 = 992876

```

Terminal window to the ChorusOS kernel debugger KDB

### Kernel and/or Application Debugging

Due to the fact, that TRACE32 is a hardware debugging tool, you are able to debug anything you want, including bootstrap code, initialization phase, interrupt routines, drivers, kernel, etc. Additionally, TRACE32 has a special

MMU support, which allows you to debug ChorusOS applications (actors), too. An internal logic provides you with an easy access to all actor memory spaces.

## Real time, non-intrusive display of ChorusOS system resources

The TRACE32 multitask debugger for ChorusOS provides display functions, closely mirroring the command set of KDB. The system resources actors, threads, ports and resources can be displayed. In addition, by using the emulators dual-port memory, the display of all these regions can be viewed

non-intrusively in real time. The tables are updated permanently ("On The Fly"), without affecting the application at all. Moreover, these functions are still available, when the KDB is not linked to your software.

The image shows two screenshots from the TRACE32 debugger. The top screenshot is the 'Actor list window' for 'E::task.la', displaying a table of system actors. The bottom screenshot is the 'Detailed window' for actor '0001ED5C' in 'E::TASK.LA 1ED5C', showing various system details.

Port list window

## ChorusOS specific display of analyzer listing

The data recorded in the analyzer can be displayed and interpreted specific to the operating system. The thread switches are displayed symbolically.

Analyzer listing, display of thread switches

## Statistic evaluation and graphic display of thread run times

The analyzer can calculate statistic tables of thread run times and thread switches. A graphical diagram shows

which thread was active at a specific time, giving a clear view of the behaviour of the system.

Statistics and flow of threads

## Thread related evaluation of function run times

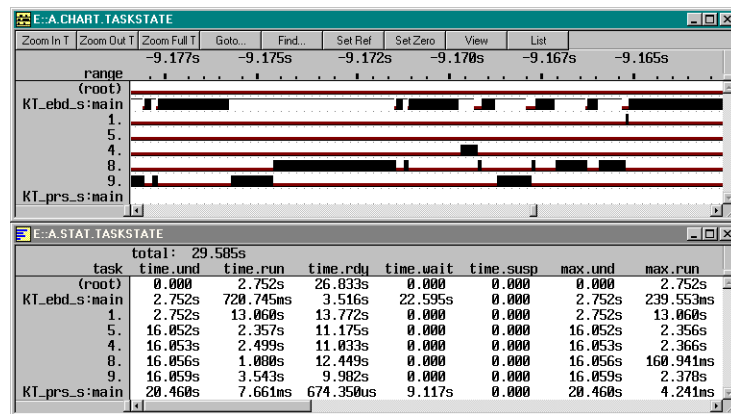

The statistic and graphic evaluation of function calls and function run times can be done dependant to the actual running thread. This is necessary, if dif-

ferent threads call one single function at the same time, or if a thread switch occurs in between the function.

## Statistic evaluation and graphic display of thread states

These tabular and graphical analyses of the status of threads show the various states (i.e. running, ready, waiting, suspended and undefined) and times each thread spent in each state. A

graphical view of the data can help to highlight prioritisation problems, critical paths etc.

Statistics and flow of thread states

## Thread Stack Coverage

In real time systems it is quite important to know, how much stack space each thread consumes. For this pur-

pose a special window shows the current and the maximum usage of each separate thread.

Thread stack coverage window

---

### PRACTICE functions for OS data

The support includes extended PRACTICE functions for process specific data. E.g. the function "task.actor.start

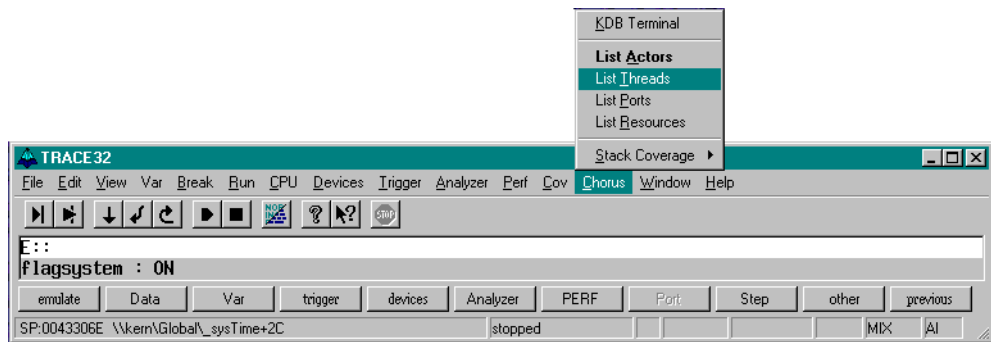

("myActor\_s", 1)" returns the code address of the supervisor actor "myActor".

---

### ChorusOS related pull-down menu

Because the menu bar of the TRACE32 user interface can be fully customized, you can create a new pull down menu, including operating sys-

tem specific commands. We deliver ChorusOS support with an example for such specific menus, which provides fast access to the ChorusOS features.

TRACE32 with ChorusOS menu
