

In-Circuit Emulator for the 80186 and 80196

V40

- Works with Intel, Microsoft, Borland and many other Compilers
- C++ support
- Up to 40 MHz no-waitstate emulation
- Dual ported memory
- FPU support
- Support for all 5V and 3.3V derivatives
- Banking support for 16 banks (186) or 256 banks (196)
- Supports memory split for program and data
- CASE tools interface
- RTOS support
- Windows9x, NT and X windows interface

The TRACE32-ICE186 supports microcontroller from AMD, NEC and Intel. Its modular and open technology allows the fast integration of new chip designs.

A software compatible ROM Monitor is also available.

TRACE32 works with the highest variety of host interfaces. The communication link to the host is done by the printer port, a fibre optic interface or ethernet allowing a high-speed transfer.

Features

Basics of Operation

The ICE-186 is a high-performance emulation system. The change between the different supported CPU types is done by changing the emulation module.

On the emulation base there is an extra slot for the TRACE32 Port Analyzer. Depending on CPU type various signals can be traced. Some probes also have connectors to trace external target lines.

Operating Modes

The emulator can work in stand-alone mode with internal clock or in active mode with internal or the target clock. On power-down of the target system the emulator tristates its output buffers and isolates its internal emulation circuits.

The operation modes are as follows:

- Reset Down
- Reset Up
- Alone Internal
- Alone External
- Emulation Internal
- Emulation External

Clock

- Operation with external or internal clock
- 1..40 MHz internal clock

Bank Support

External bank switching schemes or the MMU can be supported by the memory mapper. Therefore a separate input probe is needed for the emulator.

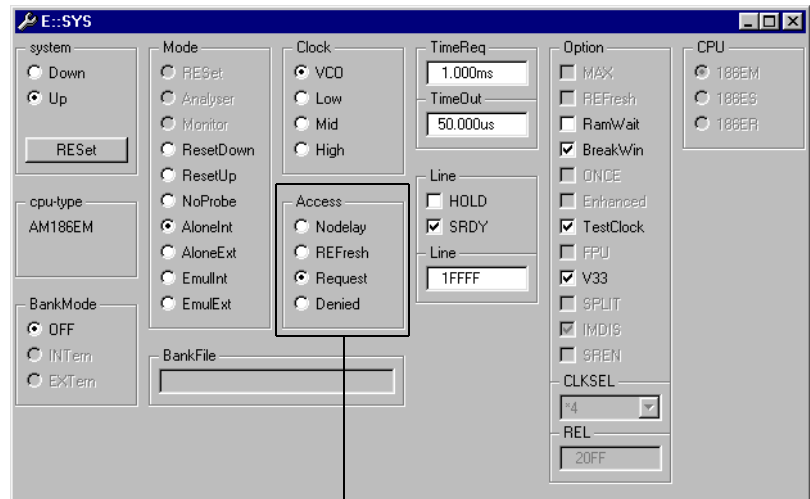

- 16 banks for 186
- 256 banks for 196

Selective Mapping of Memory Classes

The address mapper can segment the memory into program and data area. By using this segmentation e.g. it is possible to map the program area to

the emulation memory while the RAM area remains mapped to the target memory.

Dual-Port Access

Dual port access modes

All TRACE32 memories are dual-ported. The dual-port access makes it possible to display and modify the contents of the overlay memory, to set or delete breakpoints or use the flag memory while the application is running in real-time.

The following dual-port access modes are implemented:

- Nodelay
- REFresh (not 196)
- Request (not 196)

In the **Nodelay mode** the dual-port cycle is inserted between the bus cycles generated by the CPU. This means that the max. speed of operation is not possible in this mode, or extra wait states are needed for correct operation.

In the **REFresh mode** refresh cycles of 188/186 Enhanced Mode controller are used to generate dual-port cycles.

In the **Request mode** Hold/HLDA line of the CPU is used to implement dual-port cycles.

In the **Denied Mode** the dual-port access is switched off.

HLL Debugging

Step	Step Over	Go Next	Go Return	Go Up	Go	Break	Mode
addr/line	code	label	mnemonic	comment			
				register int i, prime, k;			
				int count;			
568				count = 0;			
P:0040:077F	C746FC0000		mov	word ptr [bp-4],0			
570				for (i = 0 ; i <= SIZE ; flags[i++] = TRUE) ;			
P:0040:0784	2BF6		sub	si,si			
P:0040:0786	EB08		jmp	790			
P:0040:0788	BBDE		mov	bx,si			
P:0040:078A	46		inc	si			
P:0040:078B	C687D		mov	byte ptr [bx+4D8],1			
P:0040:0790	B3FE1		cmp	si,+12			
P:0040:0793	7EF3		jle	788			
572				i <= SIZE ; i++)			
P:0040:0795	2BF6		sub	si,si			
P:0040:0797	EB26		jmp	7BF			
574				lags[i])			

The TRACE32 Debugger supports all standard compilers for C and C++. For more information refer to the section "Debug Interfaces".

Full support in real-time for:

- Break-before-line operation
- HLL single step in real-time
- Trigger and trace on local variables

Background Task

The background task allows:

- To process interrupts

- To maintain the refresh of a target DRAM

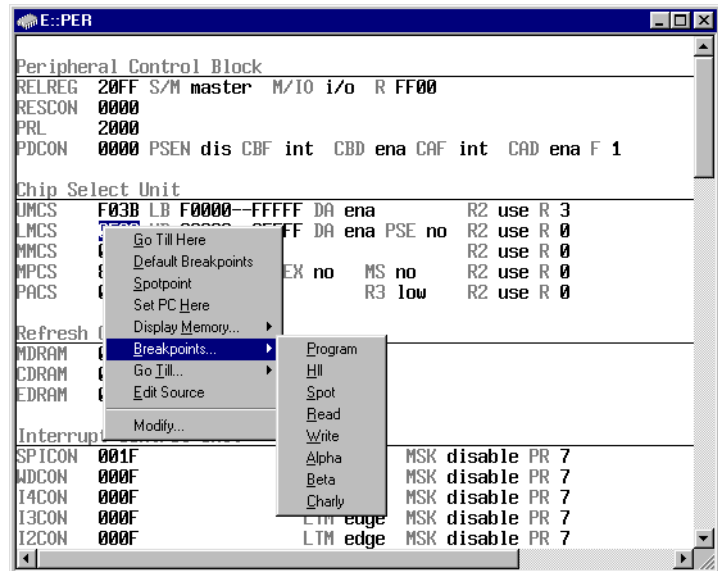

while the emulation is stopped.

Wait System

- Additional wait cycles (1-15) may be specified

- Up to 250 wait cycles (4K blocks global and bitwise)

CPU Peripherals

- Display of onchip peripherals
- User definable display of the onchip peripherals
- Definition is done interactive supported by softkeys
- Pull down menus for settings
- Additional description for each field
-

FPU Support

The display and modification of the FPU registers is supported.

Exception Control

The TRACE32 exception controller allows to permanently activate an exception, to enable or disable specific

exceptions, to trigger on specific exceptions or to stimulate an exception.

Clock Fail Detection

On-Circuit Emulation

- Supports the ONCE mode Clip-Over adaptation

Modules Overview

tbd

Debug Interfaces

TRACE32-PowerView supports most compilers, realtime operation systems and debuggers.

New integrations are mostly done on customers request. If your compiler or RTOS is not supported now, please ask us !

Operation Voltage and Frequency

The maximum operation frequency of TRACE32-ICE depends on:

- The max. frequency of the CPU
- The access time of the overlay memory (15ns or 35ns)
- The mapper mode (**S**low or **F**ast)
- The number of waitstates (W0 = 0 waitstates
W1 = 1 waitstate)
- The dual-port access mode

Denied Access

Nodelay Access

Operating Voltage

This list contains information on probes available for other voltage ranges.

Probes not noted here supply an operation voltage range from 4.5V to 5.5V. tbd

Dimensions

Module Dimensions

tbd

Connectors

On each emulation module there are half-size connectors to:

- ❑ Connect the emulation module directly to the target by providing the corresponding connectors also on the target hardware

- ❑ Connect a standard adapter from Emulation Technology, YAMAICHI, AMP, TOKYO ELETECH etc.

The following table lists the physical dimensions of these connectors.

tbd

Adapter

The adapters connect in different ways

- With Clip-Over Adapters the CPU can stay on the target board.
- With Solder-ON adapters the CPU must be removed

- YAMAICHI and AMP adapters fit to the CPU socket

The following table lists the physical dimensions of these adapters.

Not necessary.

Available Tool Chain

TRACE32 provides a complete set of development tools for this family. This includes:

- The In-Circuit Emulator TRACE32-ICE
- The high speed RISC Emulator TRACE32-FIRE
- The BDM/JTAG/ONCE etc. based In-Circuit Debugger TRACE32-ICD
- The ROM Monitor based In-Circuit Debugger TRACE32-ICD
- The ICD Trace, a trace extension to the BDM/JTAG debuggers or ROM monitors
- Evaluation boards, which can be used until the target hardware is available.
- The Instruction Set Simulator (SIM), a software tool for code test without any hardware

The following list give an overview which development tools are available for the specific derivatives of this family.
