

RTOS Debugger for pSOS+

680x0**683xx****ARM****PowerPC****X86****i386**

- Improved support for the CMX debugger CMXBug
- Real time, non-intrusive display of CMX system resources
- CMX specific display of analyzer listing
- Statistic evaluation and graphic display of task run times
- Task related evaluation of function run times
- Statistic evaluation and graphic display of task states
- Task stack coverage
- PRACTICE functions for OS data
- CMX related pull-down menu

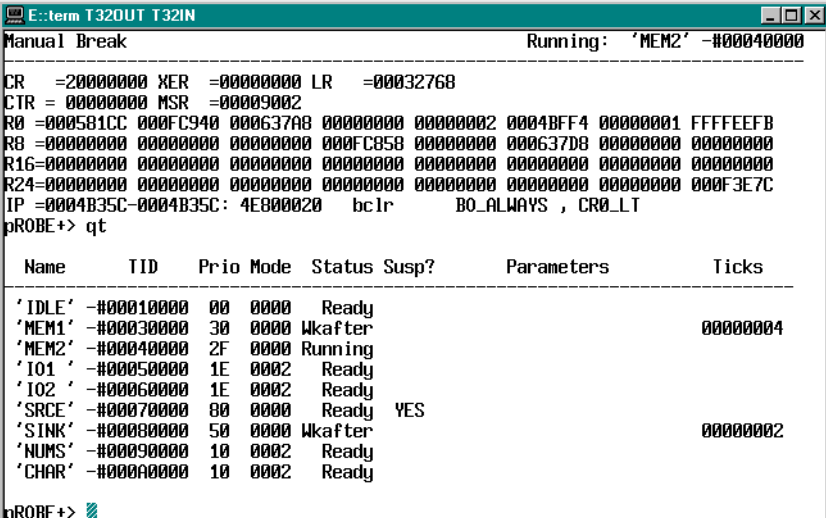

The TRACE32 System includes a configurable multitask debugger to provide symbolic debugging in real time operating systems. The software package contains a ready-to-run configuration for the pSOS+ Real Time Kernel from Integrated Systems.

Multitask Debugging on TRACE32 with pSOS+

Improved support for the pSOS+ Debugger pROBE+

pSOS+ provides a kernel debugger called pROBE+, which runs on the target. TRACE32 provides an interface to this debugger. I.e. you can control the debugger and view its outputs inside the TRACE32 surface. The communication is set up via the emulator's dual port memory, substituting the serial

interface routines of pROBE+. This technique provides high speed, transparent communication with the target without the use of any serial hardware or other target resources.

```

Terminal window to the pSOS+ debugger pROBE+

Manual executed system calls

In pSOS+ on 68k it is possible to execute system calls, initiated with PRACTICE from the TRACE32 surface. This technique can be used, for example to

set specific signals, to suspend tasks or simulate some other special condition.

PRACTICE functions for OS data

The support includes extended PRACTICE functions for process specific data. E.g. the function "TASK.CONFIG(magic)" returns the address of the so called magic value.

Real time, non-intrusive display of pSOS+ system resources

The TRACE32 multitask debugger for pSOS+ provides display functions, closely mirroring the command set of pROBE+. The system resources configuration, tasks, objects, partitions, queues, regions and semaphores can be displayed. In addition, by using the emulators dual-port memory, the display

of all these regions can be viewed non-intrusively in real time. The tables are updated permanently ("On The Fly"), without affecting the application at all. Moreover, these functions are still available, when the pROBE+ is not linked to your software.

The top window shows a task list with the following data:

magic	name	id	prio	mode	status	susp	parameters	ticks
00065310	IDLE	00010000	00	0000	Ready			
00065588	MEM1	00030000	30	0000	Wkafter			00000002
000656C4	MEM2	00040000	2F	0000	Running			
00065800	I01	00050000	1E	0002	Ready			
0006593C	I02	00060000	1E	0002	Ready

Detailed view of one region

pSOS+ specific display of analyzer listing

The data recorded in the analyzer can be displayed and interpreted specific to the operating system. The task switches are displayed symbolically. In

68k systems, additionally the system calls, including their parameters, can be displayed symbolically.

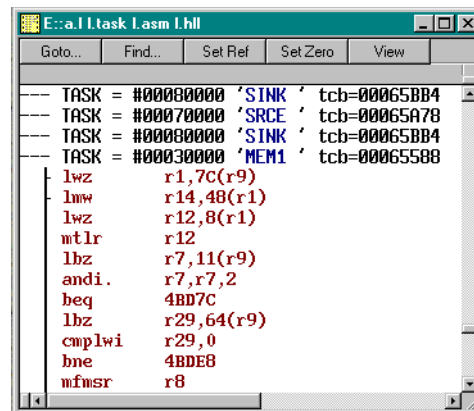

```

E::a.list l.task l.nc %len 40. spare

Analyzer listing, task selective recording, display of task switches and assembler mnemonics

Statistic evaluation and graphic display of task run times

The analyzer can calculate statistic tables of task run times and task switches. A graphical diagram shows

which task was active at a specific time, giving a clear view of the behaviour of the system.

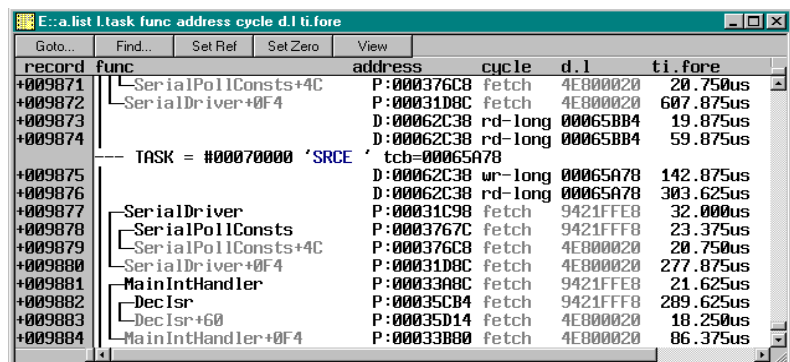

Statistics and flow of tasks

Task related evaluation of function run times

The statistic and graphic evaluation of function calls and function run times can be done dependant to the actual running task. This is necessary, if dif-

ferent tasks call one single function at the same time, or if a task switch occurs in between the function.

Analyzer listing, function call hierarchy and task switches

Statistics on function hierarchy, task related

Statistic evaluation and graphic display of task states

These tabular and graphical analyses of the status of tasks show the various states (i.e. running, ready, waiting, suspended and undefined) and times each task spent in each state. A graphical

view of the data can help to highlight prioritisation problems, critical paths etc.

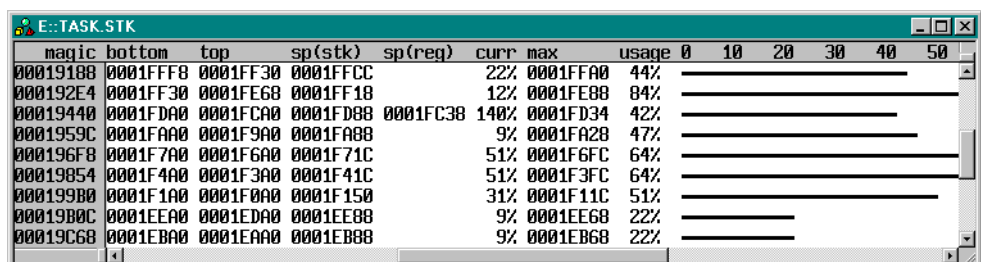

Statistics and flow of task states

Task Stack Coverage

In real time systems it is quite important to know, how much stack space each task consumes. For this purpose

a special window shows the current and the maximum usage of each separate task.

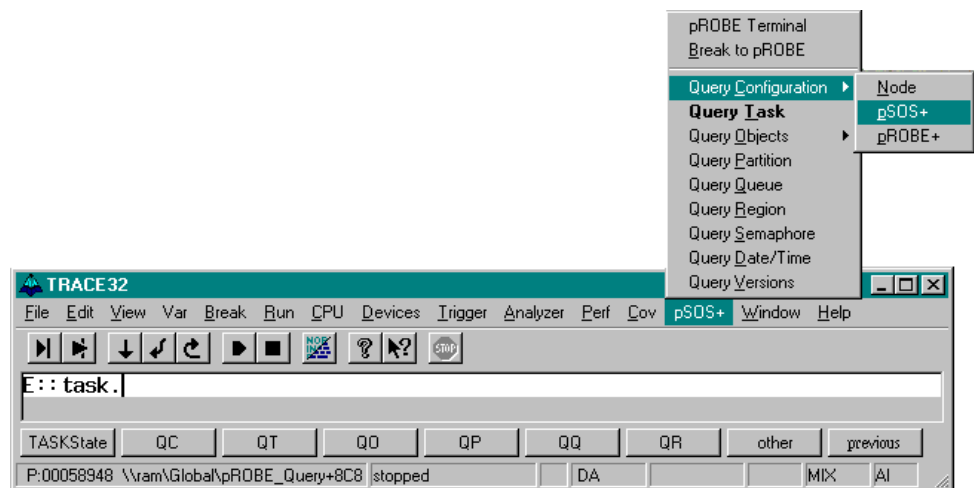

Task stack coverage window

pSOS+ related pull-down menu

Because the menu bar of the TRACE32 user interface can be fully customized, you can create a new pull down menu, including operating system specific commands. We deliver

pSOS+ support with an example for such specific menus, which provides fast access to the pSOS+ features.

TRACE32 with pSOS+ menu

Task selective debugging

On 68k processors (not CPU32), we offer you a task selective debugger. You can work on a specific task in the

foreground, while all other tasks, including the kernel, keeps on running in the background.
