

RTOS Debugger for SCIOPTA

ARM
PowerPC

- Real time, non-intrusive display of Sciopta system resources
- Sciopta specific display of analyzer listing
- Statistic evaluation and graphic display of task run times
- Task related evaluation of function run times
- Task stack coverage
- Task context display
- PRACTICE functions for OS data
- Sciopta related pull-down menu

The TRACE32 System includes a configurable RTOS debugger to provide symbolic debugging in real time operating systems. Our software package contains a ready-to-run configuration for the Sciopta Real Time Kernel from Sciopta Systems AG.

In close cooperation with Sciopta we built a special RTOS support for Sciopta. This leaflet will guide you through the additional implemented features in TRACE32, to do an effective debugging on Sciopta systems.

RTOS Debugging in TRACE32 with Sciopta

Real Time, Non-Intrusive Display of Sciopta System Resources

The TRACE32 RTOS debugger for Sciopta provides display functions to show internal information. The system resources modules, processes, pools and queues can be displayed. If the target allows memory reads while run-

ning, the display of all these regions can be viewed non-intrusively in real time. The tables are updated permanently ("On The Fly"), without affecting the application at all.

Module list, process list and pool display

Process Related Breakpoints

Any breakpoint set in the TRACE32 debugger can be set dependent to a specific process. This means, that the breakpoint will then only halt, if hit by

the specified process. This allows process related debugging even in shared code.

Breakpoint list window with process specific breakpoints

Process Context Display

The TRACE32 RTOS debugger provides an easy way to switch the current displayed context to another process. Normally all register related windows (e.g. listing at current PC, local variables of function call stack) are dis-

played related to the actual context (i.e. current executed process). You can switch to the context of another process to see all this information at the time this process was scheduled.

```

B::v.f
-000| sc_msgRx (asm)
-001| display()
      sel = (4096, 0)
      msg = 0x0
      sender = 2
      {
        static const sc_msgid_t sel[2] = { STRING_MSG_ID, 0 };
        sc_msg_t msg;
        sc_pid_t sender;
        for(;;){
          /*
            msg = sc_msgRx(SC_ENDLESS_TMO, (const void FARPTR)sel, SC_MSGRX_MSGID);
          */
-002| sc_sysIllegalReturn (asm)
      }
      b sc_sysError1
      end of frame
  
```

Function call hierarchy of a specific process

Process Stack Coverage

In real time systems it is quite important to know, how much stack space each process consumes. For this pur-

pose a special window shows the current and the maximum usage of each separate process.

name	low	high	sp	%	lowest	spare	max	0	10	20	30	40	50
init	21005940	21005840	21005A6D	41%	21005A6C	0000012C	41%	[Bar chart showing 41% usage]					
SCI_sysTick	21006440	21006840	21006810	4%	21006798	00000358	16%	[Bar chart showing 16% usage]					
hello	21006940	21006D40	21006C74	19%	21006C0C	000002CC	30%	[Bar chart showing 30% usage]					
display	21006E40	21007240	21007130	26%	2100709C	0000025C	41%	[Bar chart showing 41% usage]					

Process stack coverage window

Dynamic Process Performance Measurement

While Sciopta is running, TRACE32 is capable of recurrently evaluating the current running process and collecting the results. The percentage, each process consumes of the system, is then

displayed graphically and updated permanently. The longer time you let the measurement run, the more exact are the results. This feature is available even without any hardware trace.

Performance measurement list

Sciopta Specific Display of Trace Listing

The data recorded in the real time trace buffer (if available) can be displayed and interpreted specific to the operating system. The process switches are

displayed symbolically, either exclusively or in addition to other information.

Statistic Evaluation and Graphic Display of Process Run Times

Out of the real time trace buffer (if available), the analyzer can calculate statistic tables of process run times and process switches. A graphical diagram

shows which process was active at a specific time, giving a clear view of the behavior of the system.

Statistics and flow of processes

Process Related Evaluation of Function Run Times

The statistic and graphic evaluation of function calls and function run times (if available) can be done dependant to the actual running process. This is nec-

essary, if different processes call one single function at the same time, or if a process switch occurs in between the function.

PRACTICE Functions for OS Data

The support includes extended PRACTICE functions for OS specific data. E.g. the function "task.config(sciopta)"

returns the address of the Sciopta base structure.

Sciopta Related Pull-Down Menu

Because the menu bar of the TRACE32 user interface can be fully customized, you can create a new pull down menu, including operating system specific commands. We deliver

Sciopta support with an example for such specific menus, which provides fast and easy access to the Sciota specific features.

TRACE32 with source window and opened Sciopta specific displays
